

PolyAI — Internal Pre-Meeting Prep

Account owner: TBD (see Decision 1) · **Prepared by:** Kyle Hix · **Prepared:** Oct 5, 2026 · **Fit score:** 63/100 (active prospect, OEM expansion) · **Full brief:** next pages

Purpose of this meeting: decide whether and how Deepgram expands at PolyAI, who leads, and how we handle Kyle's recent employment there.

The account in 60 seconds

- **What they are:** an enterprise voice-agent vendor (Marriott, Caesars, PG&E, UniCredit, FedEx). \$200M+ raised, Series D Dec 2025, NVIDIA's NVentures is an investor.
- **Already a Deepgram account (per their docs):** Deepgram is one of **seven ASR providers** PolyAI routes calls to by language, with automatic fallback. Google, AWS, OpenAI Whisper, and NVIDIA are the others.
- **They are bringing speech in-house:** Owl ASR (built on NVIDIA Riva) and **Dialog-RSN-1** (Jul 30, 2026), an audio-native model that absorbs ASR. **It is English only.**
- **Opening:** the non-English and fallback minutes across 75 languages, plus **TTS**. Their list has seven TTS vendors (ElevenLabs, Cartesia, Rime, and others) and **no Aura**.
- **New people:** Paul Asoyan (VP Strategic Alliances, ex-Google) and Helen Greul (SVP Eng) both joined in May 2026.

Decisions we need today

#	Decision	Options	Recommendation
1	Who leads the account	Kyle · existing Deepgram owner / partnerships team · joint	Existing owner or partnerships leads; Kyle advises on public information only until legal clears it
2	Motion	OEM expansion · co-sell into shared CCaaS accounts · both	OEM expansion first (ASR share + Aura); co-sell as phase 2
3	Bake-off scope	Non-English ASR · TTS (Aura) · both	Both: their 3–5 highest-volume non-English languages, plus an Aura latency / cost test
4	Commercial stance	Volume pricing aimed at self-serve margins?	Decide internally after pulling current usage
5	Position vs. RSN-1	Compete in English · complement	Complement. Don't fight Owl or RSN-1 in English

Who does what (assign owners)

Workstream	Owner	Due
Find the current Deepgram owner of PolyAI; pull usage (minutes, languages, Nova vs. Aura, trend)	_____	This week
Legal / manager review of Kyle's PolyAI separation agreement (confidentiality, non-solicit)	Kyle Hix + Legal: _____	Before any outreach
Outreach to Paul Asoyan (VP Strategic Alliances)	Account owner: _____	After the two items above
Bake-off plan: non-English ASR on their audio + Aura TTS test	Sales Engineer: _____	Before first meeting

Workstream	Owner	Due
Map shared Five9 / Genesys / Amazon Connect / Twilio accounts	Partner manager: _____	Two weeks
Check whether NVIDIA-related terms limit vendor choice (from public information only)	_____	Discovery

What we still don't know (and how we'll find out)

Unknown	Why it matters	How to find out
Deepgram's current share of PolyAI ASR minutes	Sets the size and baseline of the opportunity	Internal usage data
Which languages route to which provider	Defines the bake-off targets	Discovery Q1–Q2
RSN-1 roadmap beyond English	Decides how long the opening lasts	Discovery Q3; watch PolyAI's blog
Speech ML lead's name	The technical evaluator	Public posts and talks; ask Asoyan
How NVIDIA's investment affects speech vendor choice	Possible hidden blocker	Discovery Q7

Risks to discuss

- **Conflict of interest.** Kyle left PolyAI in Sep 2026. *Counter:* legal review; use public information only; another rep or partnerships leads the account.
- **In-house speech shrinks third-party ASR.** RSN-1 may expand to more languages. *Counter:* also win TTS (Aura), which RSN-1 leaves open by design, and lock in multilingual volume now.
- **NVIDIA alignment.** Investor plus Riva base. *Counter:* position Deepgram as managed multilingual coverage they don't have to train, routed by measured accuracy.
- **Price pressure** from a vendor that buys infrastructure. *Counter:* commit to volume tiers; show the full cost (fallback, vendor sprawl), not just the per-minute rate.
- **Evidence quality.** Poly.ai and Deepgram pages were blocked during research; key facts (the provider list in particular) come from search excerpts. Verify before quoting.

Proposed first customer meeting (30 min, with Alliances + Engineering)

1. **Intros and purpose** (3 min)
2. **Their roadmap:** RSN-1 languages, self-serve growth, channel goals (7 min)
3. **Discovery:** ASR routing per language, TTS choice, where speech fails (10 min)
4. **Proof:** Nova multilingual / alphanumeric results; live Aura latency demo (6 min)
5. **Next step:** agree on bake-off languages and an audio-sharing path (4 min)

Asks of the team

- Partnerships: is PolyAI a known partner or OEM account? Who owns it?
- SE: can we run a non-English bake-off on telephony audio within two weeks?
- Marketing: an Aura reference in voice agents, and any named multilingual Nova proof point.

PolyAI — Voice AI Account Brief

Generated 2026-10-05 · Depth: quick · Fit score: **63/100 (active prospect)**

Legend: plain text = sourced fact [n] · **HYPOTHESIS** = inference, verify on the call · **Unknown** = not found; see discovery questions

STALE **Evidence quality:** poly.ai, docs.poly.ai, and deepgram.com were blocked from this research environment. Facts from those sites come from search-result excerpts. Open each link before quoting it.

TL;DR (read this in the elevator)

- **Who they are:** London-based enterprise voice-agent vendor ("The Agentic Dialog Platform"). 100+ enterprise customers (Marriott, Caesars, PG&E, UniCredit, FedEx) across 25 countries and 75 languages. \$200M+ raised; Series D Dec 2025 at a reported ~\$750M valuation [8][13][23].
- **Why now:** PolyAI is moving its speech layer **in-house**. Owl ASR is built on NVIDIA Riva [4][5], and Dialog-RSN-1 (Jul 30, 2026) merges speech recognition into an audio-native model, but it is **English only** [6][7]. Every other language still runs through third-party ASR, and **Deepgram is already one of the providers wired into the platform** [2][3].
- **#1 pain hypothesis:** **HYPOTHESIS** the multilingual long tail (non-English, fallback, and self-serve builders) runs on a patchwork of seven ASR vendors and seven TTS vendors. That raises cost, makes quality uneven, and makes latency hard to control [2][15].
- **Motion: OEM / embed (expand).** This is a vendor, not an end customer. Grow Deepgram's share of PolyAI's third-party ASR routing (non-English and fallback), and get **Aura** added to a TTS list that today has no Deepgram voice [15]. Not a displacement of Owl or Dialog-RSN-1.
- **Person to win: Paul Asoyan, VP Strategic Alliances & BD** (joined May 2026, ex-Google, ex-Gong partnerships) [11] as the door. **Helen Greul, SVP Engineering** [11] and **Shawn Wen, CTO** [5][22] decide.
- **Ask this one question:** "For calls Owl and RSN-1 don't cover, how do you choose the ASR provider for each language, and what share of minutes goes to each today?"

1. Snapshot

Industry / HQ	Conversational / voice AI software for enterprise customer service. London HQ; new Toronto tech hub (May 2026) [11]
Public / private (ticker)	Private
Revenue / funding	\$200M+ total raised; \$86M Series D (Dec 15, 2025) co-led by Georgian, Hedosophia, Khosla, with NVentures (NVIDIA) , Citi Ventures, Zendesk Ventures, and Point72 participating [8][9]. Reported valuation ~\$750M [8]. ARR not disclosed; third-party estimate ~\$35–40M (unverified) [18]
Employees	~300–360 (PitchBook / LeadIQ estimates, 2026) [19]
Customers served	100+ enterprises: Marriott, Caesars, PG&E, UniCredit, FedEx (20+ countries), Foot Locker, Hopper [23]
Volume indicators	"Millions of customer interactions" [21]. Agents handle 50–80% of routine calls without a human [23]. PG&E: 35,000 labor hours saved [23]. Exact minutes per year: Unknown

2. Strategy & Priorities (what leadership is saying)

- **Nikola Mrkšić, CEO:** *"This technology's been around for years. Siri's over a decade old. But it's always been a gimmick. Now, finally, it's becoming infrastructure."* [21] (date unknown)
- **Mrkšić on CNBC (Feb 23, 2026):** said the real AI opportunity is enterprise voice agents that remove wait times and handle the work of thousands of call-center employees at equal or higher CSAT [20].
- **Shawn Wen, CTO, on Owl:** *"The combination of NVIDIA Riva and PolyAI's know-how around spoken language understanding allows our AI agents to reduce customer frustration and build trust during the most critical customer*

conversations." [5]

- **Strategic direction (2026):** vertical integration of the voice stack (Owl ASR → Raven LLM → Dialog-RSN-1 audio-native) [4][6]; developer-first tooling (ADK, Apr 2026) [12]; self-serve platform opened to all builders (May 2026) [13]; channel-led growth, with the channel program at **30% of new bookings** [14].

3. Financial Health & Budget Signals

- Well funded after the Dec 2025 Series D. Use of funds: Agent Studio and go-to-market expansion [8].
- **HYPOTHESIS** the self-serve platform (May 2026, two months free) brings in many low-ACV builders [13]. Third-party speech cost per minute then becomes a gross-margin issue, which is where Deepgram's price at scale matters.
- **HYPOTHESIS** building ASR in-house (Owl, RSN-1) is partly a cost and control decision. Expect PolyAI to push hard on price and want flexible deployment.

4. Trigger Events (last ~90 days, plus major ones in the last 12 months)

Date	Event	Why it matters for Deepgram
Jul 30, 2026	Dialog-RSN-1 launched: audio-native model that fuses turn-taking, ASR, function calling, and response. <300 ms. English only , platform only [6][7]	English ASR minutes may move off third-party vendors. Non-English stays with vendors, and that is the opening
May 18, 2026	Agentic Dialog Platform opened to every builder; 75 languages, 25 countries [13]	Long-tail language and usage growth on third-party ASR/TTS
May 12, 2026	Four senior hires: Helen Greul (SVP Eng), Paul Asoyan (VP Strategic Alliances & BD), Morgan Norman (CMO), Danielle Waknine (VP GTM Vertical Expansion) [11]	New leaders in their first 6–12 months. The alliances lead is the natural door
Apr 22, 2026	Agent Development Kit (ADK) launched [12]	Developer-first. Deepgram's developer and API motion fits
Jan 14, 2026	Ryan Longfield named President of Go-to-Market (ex-Shopify, ex-Gong CRO) [10]	GTM scale-up; co-sell and marketplace angles
Dec 15, 2025	\$86M Series D; NVIDIA's NVentures invests [8][9]	STALE NVIDIA is both investor and ASR base (Riva / NeMo). Strong pull toward NVIDIA for speech

5. Contact Center & CX Operations (their customers', and their platform's)

- PolyAI is the voice agent sitting in front of its customers' contact centers. Its own support operation is not relevant here.
- **Hand-off integrations:** Five9 (SIP trunk), Genesys Cloud (BYOC), Amazon Connect (contact flows + Lambda), Twilio Flex. Also NICE; CRMs Salesforce, ServiceNow, Dynamics [16]
- **Verticals:** hospitality, financial services, healthcare, energy / utilities, retail [23]
- **Known pain:** none public. **HYPOTHESIS** quality on accented and non-English telephone audio, and latency consistency across providers.

6. Tech Stack & Incumbents

Layer	Vendor	Evidence	Implication
ASR (in-house)	Owl , fine-tuned on NVIDIA Riva; WER 0.122 on PolyAI's phone benchmark [4][5]	PolyAI blog	Don't attack it. Position Deepgram as the multilingual / fallback complement and benchmark partner
Audio-native model	Dialog-RSN-1 (English) [6]	Press, Jul 2026	Long-term threat to cascaded STT in English

Layer	Vendor	Evidence	Implication
ASR (third-party)	Deepgram , Google STT v1/v2, NVIDIA Riva, Amazon Transcribe, OpenAI Whisper, Fano, NVIDIA NeMo, routed per language with automatic fallback [2][3]	Docs (search excerpt)	Deepgram already present → expansion. Google / AWS / OpenAI are direct competitors in the same router
LLM	Raven (proprietary) plus third-party (e.g., Amazon Nova Micro via Bedrock) [4]	Docs	Not our layer
TTS	ElevenLabs, Cartesia, Rime, PlayHT, Minimax, Hume, Google TTS [15]	Docs (search excerpt)	No Aura. New-logo opening inside the account. ElevenLabs / Cartesia are competitors
CCaaS / telephony	Five9, Genesys, Amazon Connect, Twilio, NICE [16]	Docs	All are Deepgram partners (except NICE, "either"). Shared co-sell ecosystem
Hiring / ML	ML Engineer focused on ASR, TTS, and AudioLLMs [17]	Built In	Confirms the in-house speech build

7. Hiring Signals

- **Speech ML:** "Machine Learning Engineer specialising in speech recognition... primary focus will be on ASR, TTS, and AudioLLMs" (UK, £65–82K) [17]. Means: an active in-house speech build.
- **Platform engineering:** Software Engineer (Voice Team), Engineering Manager (Runtime), Senior Research Scientist [17]. Means: they are investing in the real-time voice runtime.
- **Partner / channel:** Senior Partner Solutions Engineer (NYC) [16]. Means: the channel is scaling (30% of bookings) [14].
- Total open roles: ~50 on LinkedIn (snapshot, unverified).

8. Buying Committee

Persona	Name	Title	Tenure / background	Likely role	Source
Executive sponsor	Nikola Mrkšić	Co-founder & CEO	Founder; public voice of the company	Approver for strategic partnerships	[20][21]
CTO	Shawn (Tsung-Hsien) Wen	Co-founder & CTO	Ex-Google Brain research scientist; ex-IPSoft Amelia; author of Owl + Riva	Technical approver. Owns the build-vs-buy speech stance	[5][22]
Engineering lead	Helen Greul	SVP Engineering	Joined May 2026; ex-Multiverse, ex-Spotify developer tooling	Technical buyer for platform vendors and cost	[11]
Engineering	Eddy Su	Co-founder & SVP Engineering	Co-founder	Technical influencer	Crunchbase (search excerpt)
Alliances / BD	Paul Asoyan	VP Strategic Alliances & BD	Joined May 2026; 13 years at Google; led strategic partnerships at Gong	Champion / door for an OEM + co-sell agreement	[11]
GTM	Ryan Longfield	President, Go-to-Market	Joined Jan 2026; ex-Shopify, ex-Gong CRO	Co-sell / marketplace sponsor	[10]
Speech ML lead	Unknown	—	—	Technical evaluator (runs the bake-off)	Find via the hiring manager on [17]

9. People You're Meeting

No attendees given.

10. Competitive Landscape

- **PolyAI's market peers:** Sierra, Decagon, Parloa (raised \$350M at ~\$3B, Jan 2026), Retell, Vapi, Bland, ElevenLabs Agents [24]. Several peers build on Deepgram, so "speech layer neutral to all platforms" is a credible pitch. **HYPOTHESIS** PolyAI may resist a vendor shared with competitors, so lead with a benchmark, not logos.
- **Deepgram competitors in the account:** Google STT + TTS, Amazon Transcribe, OpenAI Whisper (ASR router) [2]; ElevenLabs, Cartesia (TTS) [15]; **NVIDIA Riva / NeMo** (base of Owl, and NVIDIA is an investor) [5][9].
- **Deepgram partners in common:** Five9, Genesys, Amazon Connect, Twilio [16]. **HYPOTHESIS** there are joint accounts where a PolyAI agent on Five9 or Connect could run Deepgram end to end.

11. Pain → Solution Map

Observed signal	HYPOTHESIS Pain hypothesis	Our value prop	Proof point
7 ASR providers routed per language [2]	Uneven quality and many vendor contracts to manage	One accurate, multilingual STT across more languages, plus TTS from the same vendor	Wistia: 30% lower WER, 3–5x lower cost
RSN-1 English only; 75 languages advertised [6][13]	Non-English calls get a worse experience and fall back to legacy cloud ASR	Nova accuracy on accents and alphanumerics in more languages	Five9: authentication rates doubled; 2–4x better on alphanumerics
Self-serve platform launch [13]	Speech cost per minute hurts margin on low-ACV builders	Lower cost at scale than hyperscaler speech	Wistia cost data
TTS: 7 vendors, no Deepgram [15]	Latency and cost of premium TTS on high-volume calls	Aura: low-latency, cost-efficient TTS for real-time agents	Ask marketing for an Aura voice-agent reference
Banks / healthcare customers (UniCredit) [23]	Data residency limits which vendors can serve EU or regulated calls	VPC / on-prem deployment	Elerian AI (banking, on-prem)

12. ROI Sketch (OEM view: minutes, not agent savings)

- **Platform volume:** *assumed* 100+ enterprise customers [23] × ~0.5M calls each = ~50M calls/yr × ~3 min = **~150M minutes/yr** (assumption; validate).
- **Third-party ASR share:** *assumed* 20–40% (non-English, fallback, self-serve) → **30–60M minutes/yr** routed outside Owl/RSN-1.
- **TTS:** every AI-spoken turn needs TTS. **HYPOTHESIS** TTS minutes are close to ASR minutes.
- Deepgram's current share of these minutes: **Unknown**. Check our own usage data for the PolyAI account first. Do not price this in front of PolyAI until the internal check is done.
- For PolyAI's own pitch to customers, a Forrester TEI reports 391% ROI and \$10.3M in three-year labor savings [23].

13. Talk Track

- **Opener (≤2 sentences):** "RSN-1 is a big step for English. We'd like to make sure every call outside it, in 70+ other languages, plus fallback and self-serve builders, is as accurate and cheap as your best English call."
- **Three value angles:** 1. **CTO / SVP Eng:** fewer speech vendors to manage. One provider for multilingual STT and TTS with consistent latency, deployable in VPC for EU banking and regulated data. 2. **Alliances / GTM:** co-sell into shared Five9 / Genesys / Amazon Connect / Twilio accounts; Deepgram as a neutral speech layer that supports PolyAI's channel (30% of bookings). 3. **Finance / platform margin:** lower cost per minute at self-serve scale than hyperscaler speech.
- **Relevant customer story:** Five9 healthcare authentication result (alphanumerics) and the Elerian AI on-prem banking deployment (fits UniCredit-type customers).

14. Discovery Questions (ranked by deal impact)

1. Which languages and use cases still route to third-party ASR, and what share of minutes goes to each provider?
2. How do you decide the routing per language: accuracy benchmark, cost, or contract? Who owns that decision?
3. What is the RSN-1 roadmap for languages beyond English, and when?
4. How do you choose TTS vendors per customer? Would you add a lower-cost, low-latency option for high-volume agents?
5. Where does third-party ASR fail most today: accents, alphanumerics, noisy lines, specific languages?
6. Do EU or regulated customers need speech in-region or in a VPC? How do you handle that today?
7. How does the NVIDIA relationship (investor + Riva) affect which speech vendors you can add?
8. Would co-selling into shared Five9 / Genesys / Connect accounts help your channel team?

15. Likely Objections & Responses

Objection	Response
"We built Owl and RSN-1. We don't need external ASR."	Agreed for English. Your docs show multi-provider routing for the rest; let's win a measured share of those languages on your own audio.
"We already have Deepgram in the router."	Good. Then this is about the share of minutes and adding Aura TTS, on commercial terms that fit self-serve margins.
"NVIDIA is our partner and investor."	Riva is a toolkit you fine-tune; Deepgram is a managed, multilingual service you don't have to train. Use both, routed by measured accuracy.
"Deepgram powers our competitors."	Neutral infrastructure is the point. Your differentiation is dialog and agent design, not the commodity speech layer.

16. Relationship History

- **No PolyAI–Deepgram commercial threads found in the seller's mailbox.** Deepgram already appears in PolyAI's ASR provider list [2] and lists PolyAI on its AI-apps directory [1]. **HYPOTHESIS** an existing Deepgram account exists. **Check Deepgram CRM and usage for an existing owner before any outreach.**
- **STALE Conflict check:** the seller worked at PolyAI as an Enterprise AE from Dec 2025 to Sep 2026 (source: seller's own Gmail / Calendar). Before engaging:
 - Review the separation agreement with Deepgram legal / management (confidentiality, non-solicit, non-disparagement).
 - Use **only public information**. No PolyAI pipeline, pricing, contracts, customer lists, or roadmap learned while employed.
 - Consider having Deepgram's partnerships team or another rep lead the account, with the seller advising on public information only.

17. Next Best Actions

1. **Internal first:** confirm who owns PolyAI at Deepgram (partner / OEM team?) and pull current usage (minutes, languages, Nova vs. Aura).
2. **Legal / manager check** on the seller's separation agreement before any contact.
3. If cleared: account owner to **Paul Asoyan (VP Strategic Alliances)** with a "multilingual + TTS expansion and co-sell" note; SE to propose a **bake-off on PolyAI's non-English audio** vs. the incumbents in their router.
4. Partner team: map shared Five9 / Genesys / Amazon Connect / Twilio accounts for a co-sell list.

Fit Score Breakdown

Dimension	Score	Why
Inbound volume	24/30	Platform for 100+ enterprises across 75 languages; exact minutes unknown

Dimension	Score	Why
Pain evidence	10/25	No public pain; multi-vendor routing and an English-only RSN-1 are inferred gaps
Timing / triggers	15/20	New SVP Eng + VP Alliances (May 2026), self-serve launch, RSN-1 (Jul 2026), Series D
Stack compatibility	14/15	Deepgram already wired in; shared partner CCaaS integrations
Access	8/10	Seller knows the company; constrained by the conflict check
Competitor deduction	-8	In-house Owl / RSN-1 on NVIDIA (investor), plus Google, AWS, OpenAI, ElevenLabs, Cartesia in the stack
Total	63/100	Active prospect, as OEM expansion
